

COVID-19 TIPS

FOR K-12 SCHOOLS

To learn how Sycamore School can help you manage coronavirus-related data, visit SycamoreSchool.com/covid-19-tips-for-schools.

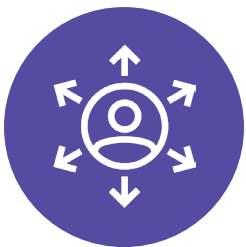

SCREEN STUDENTS

Daily screenings of students can include temperature checks, symptoms, possible exposure, travel details, and more. Tracking this data will be important in the event of an outbreak and should be readily available and easy to access.

COMMUNICATION IS KEY

Keep the lines of communication open between your families and the school. Make it easy for parents to update you on their child's health status. Keep parents, students, and staff informed if and when alternate plans become necessary.

SHARE CREDIBLE RESOURCES

Engage with other community leaders and keep your families updated about community resources as they become available. Share information only from reliable sources like your local or state health department, the World Health Organization, and the CDC.

THINK LOCALLY

Keep the needs of your specific school in mind, as well as the needs of your families, students, and staff. The Sycamore School app includes a customizable questionnaire that you can modify to gather the right data for your school.

ESTABLISH PROTOCOLS

Establish a process or processes that can be easily followed in the event of an outbreak. These could include a sanitation checklist, contingency plans in case of quarantine, plans for transitioning to online classes and meetings, and event cancellations.
